

CANADA ENERGY FACTS

WORLD RANKING OF ENERGY PRODUCTION

Canada ranks fifth in the world in total energy production, fifth in annual petroleum production, third in natural gas production, second in uranium production, and fifth in electricity produced by hydropower.

WORLD RANKING OF ENERGY CONSUMPTION

Canada ranks sixth in the world in energy consumption, tenth in crude oil consumption, and eighth in natural gas consumption.

Canada produces more electricity than it consumes, exporting 14.4%, or 92.48 billion kilowatt-hours, in 2012

Canada ranks third in crude oil reserves, at 173.63 billion barrels

As of July, 2014, Canada has a total 8,517 MW installed wind power capacity

Canada leads the world in high-grade uranium deposits, with grades up to 20%, 100 times greater than the world's average

Canada ranks fourth in the world in natural gas exports

Southern Saskatchewan has the greatest potential for solar PV

Tidal Energy Project in the Bay of Fundy, started in 2009 and currently under construction, will have generating capacity of up to 20 MW
